

Full Stack Exercise

1. Overview

Build a dashboard where security engineers can upload, view, and investigate system audit logs.

2. Data

Each log record contains the following fields:

```
{
  "actor":      "priya.nair@company.com",
  "role":       "admin",
  "action":     "DELETE_USER",
  "resource":   "/api/users/334",
  "resourceType": "USER",
  "ipAddress":  "192.168.1.45",
  "region":     "ap-south-1",
  "severity":   "HIGH",
  "status":     "Unresolved",
  "timestamp":  "2025-06-14T08:32:11Z"
}
```

3. What to Build

- A bulk upload API that accepts and stores 10,000 log records in a single request
- A dashboard to view the stored logs
- Filter logs by various fields
- Search, sort, and paginate through the results

The above filter, sort, pagination and other expected functionalities are expected to perform in the server side.

4. Stack

React • Node.js • Express • MongoDB

5. Submission

- Push your code to a public GitHub repository
 - Deploy it and share a valid link of your deployed task.
 - Include a README with setup instructions and a note on every technical decision you made
-
