

# Linux File Permissions & Umask – AWS EC2 Assignment

## Student Practiced Commands & Results

### 1. Root vs User Directory Access

Checked current directory and tested permissions in root directory.

#### Main Commands:

- `pwd`
- `cd /`
- `touch text1.txt`
- `sudo touch text1.txt`
- `rm text1.txt`
- `sudo rm text1.txt`

### 2. File Permission Practice (chmod)

Practiced changing file permissions and verified access behavior.

#### Main Commands:

- `ls -l toy.txt`
- `chmod 444 toy.txt`
- `chmod 000 toy.txt`
- `chmod 700 toy.txt`
- `chmod 744 toy.txt`

### 3. Directory Permissions

Verified execute permission requirement for directories.

#### Main Commands:

- `mkdir playground`
- `chmod 666 playground`
- `cd playground`
- `chmod 755 playground`

### 4. Umask Practice

Changed default permission behavior using umask.

#### Main Commands:

- `umask`

- `umask 027`
- `touch sample.txt`
- `mkdir sample-dir`
- `ls -l sample.txt`
- `ls -ld sample-dir`

**Conclusion:** The assignment demonstrates understanding of Linux permissions, root vs user access, directory execute behavior, and umask default permission control.
